Description
> INSPEC (Information Service in Physics, Electrotechnology and Control) is the leading English-language citation database for the world's literature on all aspects of physics, electronics, and computing. INSPEC scans papers from approximately 4,200 journals, 1000 conferences, and other publications. For news about the INSPEC database, see the INSPEC Matters newsletter at http://www.iee.org.uk/publish/inspec/inspmatt/contents.html#June1998 INSPEC corresponds to the print publications Physics Abstracts, Electrical and Electronics Abstracts, and Computer and Control Abstracts.

Title: Identification of a novel gene on chromosome 7q31 that is interrupted by a translocation breakpoint in an autistic individual.

Author: Vincent, John B.; Herbrick, Jo-Anne; Gurling, Hugh M. D.; Bolton, Patrick F.; Roberts, Wendy; Scherer, Stephen W.

Affiliation: Department of Genetics, The Hospital for Sick Children, 555 University Avenue, Room 9107, Toronto, ON, M5G 1X8 Canada

Journal: American Journal of Human Genetics ; August 2000; v.67, no.2, p.510-514.

Journal Abbr.:   AM J HUM GENET

Abstract: The results of genetic linkage studies for autism have suggested that a susceptibility locus for the disease is located on the long arm of chromosome 7 (7q). An autistic individual carrying a translocation, t(7;13)(q31.3;q21), with the chromosome 7 breakpoint located in the region of 7q implicated by genetic studies was identified. A novel gene known as "RAY1" (or "FAM4A1") was found to be directly interrupted by the translocation breakpoint. The gene, which was found to be encoded by 16 exons with evidence of alternative splicing, spanned gtoreq220 kb of DNA at 7q31.3. Mutation screening of the entire coding region in a set of 27 unrelated autistic individuals failed to identify phenotype-specific variants, suggesting that coding region mutations are unlikely to be involved in the etiology of autism. Apparent homologues of RAY1 have also been identified in mouse, rat, pig, chicken, fruit fly, and nematode. The human and mouse genes share similar splicing patterns, and their predicted protein products are 98% identical.

Concept: Behavior; Molecular Genetics (Biochemistry and Molecular Biophysics)

Taxonomic Group: Diptera -- Insecta, Arthropoda, Invertebrata, Animalia; Hominidae -- Primates, Mammalia, Vertebrata, Chordata, Animalia; Muridae -- Rodentia, Mammalia, Vertebrata, Chordata, Animalia; Suidae -- Artiodactyla, Mammalia, Vertebrata, Chordata, Animalia; fruit fly (Diptera); human (Hominidae) -- patient; mouse (Muridae); pig (Suidae); rat (Muridae); Animals; Arthropods; Artiodactyls; Chordates; Humans; Insects; Invertebrates; Mammals; Nonhuman Mammals; Nonhuman Vertebrates; Primates; Rodents; Vertebrates

Parts/System: chromosome 7q31

Disease: autism -- behavioral and mental disorders

Chemical: DNA; human RAY1 gene (Hominidae)

Sequence Data: AC002542 -- **GenBank**, nucleotide sequence; AF234882 -- **GenBank**, amino acid sequence, nucleotide sequence; AF234883 -- **GenBank**, amino acid sequence, nucleotide sequence; AF234884 -- **GenBank**, amino acid sequence, nucleotide sequence; AF234885 -- **GenBank**, amino acid sequence, nucleotide sequence; AF234886 -- **GenBank**, amino acid sequence, nucleotide sequence; AZ081238 -- **GenBank**, nucleotide sequence; AZ254572 -- **GenBank**,
